MULTI-BIN TRAILER

Does your harvest lack efficiency?

Our Multi-Bin Fruit Trailers are designed to streamline the handling of fruit bins throughout the orchard during harvest. Heavy Duty Roller Chain runs the length of the trailer, and is powered by a hydraulic motor. This allows bins to be unloaded or picked up from the comfort of the tractor cab. Built to withstand the toughest of conditions, this trailer comes with a service that is second to none.

Key Features:

- ✓ All Tube Steel Construction
- ✓ Top Quality Components
- ✓ #80HD Roller Chain
- ✓ Single or Tandem Wheel options
- ✓ 4 bin or 5 bin capacity
- ✓ Frame Cleanouts

Model 1 (tandem wheel)
Tilted

Model 2 (single wheel)
Tilted

Model 2 (single wheel)
Lowered

MULTI-BIN FRUIT TRAILER

We currently offer standard 4 bin and 5 bin trailers in two different model types. The difference between the two models lies in how the trailer tilts to unload or pick up fruit bins.

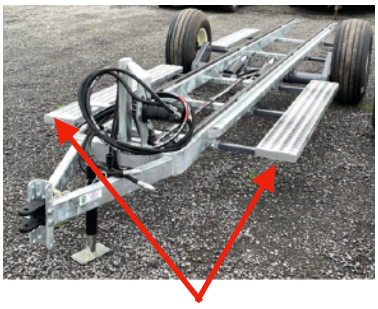
Model 1 raises the trailer at the hitch, consequently lowering the tail of the trailer to the ground. This Model is more cost effective, but is limited to only one ride height.

Model 2 raises the wheels to lower the tail of the trailer to the ground. By mounting the trailer hitch to the 3 point of the tractor, this trailer is able to lie right on the ground, creating the lowest step possible.

We also build a model that is capable of lifting empty bins onto the upper deck of harvest assist systems.

All Trailers are configurable with either a single wheel or tandem walking beam option

Frame Cleanout



Gripspan Steps (Optional)
